Product design engineer and front-end UI developer with 20+ years shipping production interfaces for insurance platforms, design systems, data-rich tools, and consumer products. Strongest where product judgment, accessible interaction design, and hands-on front-end implementation meet: framing ambiguous problems, prototyping directly in code, validating with real users and behavioral data, and carrying the strong ideas through to production without losing intent in a handoff. Current work builds and automates an enterprise design system used by thousands of engineers and designers, with AI tooling running the full loop from research to build to test and real judgment applied to what it produces.

CORE STRENGTHS

Design by building

Prototype, validate, and ship front-end work directly in modern product codebases rather than relying on static handoffs.

Design systems

Component libraries, tokens, documentation, Storybook stories, usage guidance, accessibility patterns, and developer-facing workflows.

Invisible craft

Accessibility, responsive behavior, performance, semantics, and interaction polish that make products feel fast and dependable.

Complex insurance UX

Internal portals, customer portals, admin tools, tables, filters, workflows, and data-dense interfaces for specialty-insurance users.

AI-assisted delivery

Use AI tools across research, prototyping, and build, catching where output looks right but isn't and owning the result rather than trusting it.

Product judgment

Partner across product, design, and engineering to frame what's worth building, cut scope, validate with real users, and ship the useful path.

EXPERIENCE

Software Engineer II, Design System · [Travelers](#)

2025 - PRESENT

- Build and maintain enterprise design-system components used by roughly 3,500 software engineers and designers across the organization.
- Work in Stencil Web Components, React wrappers, Storybook, Gatsby documentation, Playwright, Jest, Figma Code Connect, and Node automation to improve design-to-code adoption.
- Automated Storybook story development, saving more than 10 hours per component story and cutting repetitive setup for the team.
- Automated Figma Code Connect mapping so design and engineering artifacts stay closer together with less manual translation.
- Contribute to documentation, accessibility expectations, implementation guidance, and cross-framework usage for teams consuming the system.

Senior UI Developer · [LogATot, Inc.](#)

2023 - 2024

- Owned UI and UX delivery for a Rails platform supporting attendance, CACFP workflows, timeclock features, voice logging, Stripe billing, and bilingual English and Spanish interfaces.
- Designed and developed modular, accessible ViewComponent patterns with Hotwire, HTMX, and Alpine.js: forms, navigation, status states, tables, and admin flows that kept behavior clear and consistent for daily operators.
- Read real usage through Hotjar, Google Analytics, and HubSpot, then reworked the flows and forms where the data showed people getting stuck.
- Partnered with product and engineering to turn workflow needs into production interfaces, balancing speed, usability, accessibility, and implementation cost.

Senior Software Engineer · America's Test Kitchen

2022 - 2023

- Built and documented React, Next.js, and Storybook components during migration from a legacy Rails experience to a modern front-end platform.
- Improved accessibility, responsive behavior, and front-end quality across consumer-facing digital experiences used by a large editorial audience.
- Worked closely with editorial, product, design, and engineering partners to preserve content intent while shipping maintainable production UI.
- Settled design questions with Optimizely A/B tests and the site's analytics stack instead of opinion, and weighed each third-party script against its cost to performance, accessibility, and security.

Principal Design Engineer · Berkshire Hathaway Specialty Insurance

2018 - 2022

- Designed and built a custom Vue.js, Nuxt.js, and Hugo-based UI library for specialty-insurance portals, standardizing front-end work across internal, agent, and customer surfaces with shared components, documentation, and accessibility guidance.
- Created data-heavy interfaces for underwriting, administration, customer service, and agent workflows, including tables, filters, forms, dashboards, and task-oriented screens.
- Instrumented the portals with Segment and Heap so real underwriter and agent behavior drove which workflows and screens to prioritize, rather than guessing at what mattered.
- Translated complex insurance processes into clear, accessible, production-ready UI patterns while working with stakeholders, engineers, and subject-matter experts.

Lead UI Developer · America's Test Kitchen

2016 - 2018

- Designed and implemented a scalable UI utility system that improved consistency, development speed, accessibility, SEO, and performance across digital properties.
- Trained team members on accessible markup, front-end performance, responsive behavior, and durable UI implementation practices.
- Received the Breaking Bread Award for user-friendly, innovative content solutions that strengthened the brand's digital engagement.

Freelance UI Developer · Independent

2010 - PRESENT

- Design and build focused web applications, component systems, and front-end experiences for clients with an emphasis on clarity, accessibility, and practical delivery.
- Built data-intensive user and admin portal work for Berkshire Hathaway Specialty Insurance, and designed a web application for IVFCRYO supporting customer shipping and real-time monitoring workflows.
- Create full-stack prototypes and production applications in Rails, Hotwire, Vue, Nuxt, React, and modern CSS when direct product exploration is faster than static design.

SELECTED TOOLKIT

FRONT END	HTML, CSS, Sass, Tailwind, JavaScript, TypeScript, React, Next.js, Vue, Nuxt, Astro.js, Stencil Web Components, Storybook, Alpine.js, HTMX, Hotwire, Stimulus.
SYSTEMS & TESTING	Design systems, component libraries, design tokens, Figma Code Connect, Playwright, Jest, Vitest, Cypress, Lighthouse, Node scripts, Git, CI workflows.
DATA & EXPERIMENTATION	Segment, Heap, Hotjar, Google Analytics, HubSpot, Optimizely A/B testing, Core Web Vitals: behavioral data and experiments to drive design decisions.
DESIGN & CRAFT	Figma, Adobe CS, accessible UI, WCAG 2.1 / 2.2, responsive design, workflow design, prototyping, and design-to-code translation.

EDUCATION

Bachelor of Science, Biology · Troy University

Continuing education · Deque University Web Accessibility, personal learning projects

Current certification focus · IAAP CPACC and WAS accessibility exams
